BIOGRAPHY

Xintao Wang (王鑫涛) is a third year Ph.D candidate at Fudan University in the School of Computer Science, Shanghai, China. He is deeply fascinated with ACG culture, and is devoted to revolutionizing the ACG industry with AI techniques. Hence, his research interests primarily focus on autonomous generative agents and their personas and personalization, including (but not limited to):

- **Autonomous Generative Agents:** Developing advanced methods for autonomous, trustworthy, and personalized language agents. This extends towards the exploration of their interactions with multiple agents and real environments.
- **Cognitive Modeling in Language Models:** Focusing on integrating elements from cognitive science into LLMs, such as self-awareness, emotional perception, social intelligence, theory-of-mind, personalities, etc. The goal is to promote LLMs' understanding of the inner world of themselves and others, hence enabling them to generate more cognitively-aligned and human-like responses.
- **Role-Playing Language Agents:** Targetting at creating AI agents that embody specific characters, including:
(1) Agents for fictional characters from literature, films, anime, or games, which are utilized in primarily entertainment applications such as chatbots and interactive games; and (2) Agents that simulate real-world individuals, providing personalized services by mimicking their behaviors.
